

THE lovebiome DIFFERENCE

Microbiome health is definitely not a new concept in the market today. In fact, the world of probiotics is already getting overcrowded. But LoveBiome is different. LoveBiome stands alone as the premier solution for superior microbiome care. Here's what sets LoveBiome apart:

THE ONE THING

Microbiome health: The one thing to focus on every day

LoveBiome is the first and only company to recognize the microbiome's importance to human health and performance. The microbiome is the one thing that you should care for every day.

THE CENTER OF HEALTH

The microbiome is the Center of Health

LoveBiome recognizes the microbiome is the center of health in the human body. Energy, immunity, heart health, brain health—all healthy systems and functions of the body take their cues from the microbiome.

CONNECTIVITY

Connectivity through every cell, tissue, organ, and system

LoveBiome understands that the body's connectivity shapes health and improves function. Moreover, every important connection—gut brain, gut skin, and gut body—runs through the microbiome.

DIVERSITY

The microbiome requires probiotic diversity

LoveBiome knows the key to microbiome health is a diversity of prebiotics, probiotics, and postbiotics from natural sources. LoveBiome drills down deeper into specific probiotic strains, and specialized prebiotic blends.

TARGETED PROBIOTICS

Targeted Probiotics offer specific benefits

LoveBiome has pioneered the concept of Targeted Probiotics: specific strains of beneficial bacteria deployed for specific functions. LoveBiome has identified probiotics to help with energy production, weight loss, immune system defense, mental health, and more.

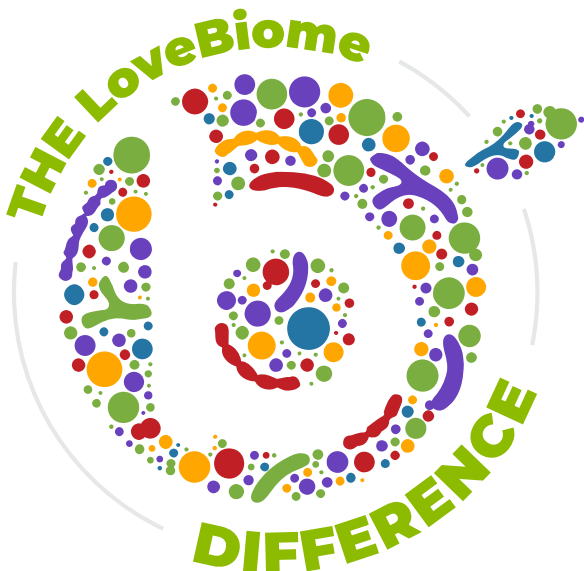

Plant life gives life

LoveBiome embraces the power of nature as it relates to complete microbiome care. Prebiotics from globally sourced, organic plant life feed and encourage the diversity of bacteria in the microbiome.

SYNBIOTICS

Synbiotics: Specialized prebiotics plus targeted probiotics

LoveBiome takes an innovative approach to microbiome care with synbiotics. Synbiotics are mixtures of prebiotics and probiotics that beneficially affect the host by improving the survival and activity of beneficial micro-organisms in the gut.

That's the LoveBiome difference. No other company or product on the planet is doing what LoveBiome does. LoveBiome is The Microbiome Company, and no one will take that title away from us. This is our world, and microbiome health is our mission.
